A backend software engineer developing software solutions in sectors like politics, automotive, travels and sports. Spending time between Aveiro & Porto.

Education

Bachelor in Computer Engineering
Instituto Superior Engenharia de Coimbra
2018-now

Learning topics like Operative System architecture, OOP, Graphic Computation. Certified in Public Speaking by Speak and Lead.

Associate Degree in Software Development
Universidade de Aveiro
2016-2018

Developed a X-CRM platform for a big automotive client during my curricular internship

Skills

I'm an experience developer working with PHP and Javascript/Node.js (frameworks like Laravel and Express included). I've worked with relational and non-related databases (MySQL, PostgreSQL, MongoDB ...)

As I'm always eager to learn something new I've learned other languages like Java, Typescript and I'm even into game development.

Experience

Backend Engineer
7EGEND
Jul 2021-now

Collaborating with other team members during the projects releases to develop new features on REST services and web applications.

Fullstack Developer
BoldApps
Nov 2020-Jul 2021

Collaborated with other team members during the development of a core software for a political party. Helped the team implementing a new development process while creating a package hub where we stored all of our private Nuget packages and forks.

LOBA.cx
Backend Developer
Fev 2018-Nov 2020

Responsible for the quality assurance of the development team, validating the software produced and the output quality. Developed REST services and integrations for major clients as well as products for sectors like travel, automotive and communications.
